DETAILED ACTION

Status of Claims

1. This action is in response to the Decision by the Board of Patent Appeals and Interferences filed on 19 May 2005.
2. Claims 1-50 are pending have been examined.

Allowable Subject Matter

3. Claims 1-50 are allowed. See Reasons for Allowance under separate heading.

Reasons For Allowance

4. The following is an Examiner's statement of reasons for allowance:

None of the art of record, taken individually or combination, disclose at least the steps of:

- i) selecting a postal mailing list from a plurality of postal mailing lists,*
- ii) sending an e-mail message to a subset of list members for each postal mailing list in a plurality of postal mailing lists,*
- iii) selecting the postal mailing list from the plurality of postal mailing lists based on the responses to such an e-mail message.*

Claims 1-50 are distinguished over the closest prior art of Druckenmiller, who in at least column 3, lines 56-64 teaches sending an automated verification email message to the mailing list member and receiving a response from the member and selecting a mailing list from a plurality of mailing lists according to a demographic, product, service, or other relevant subject, as well as "demographic information for the subscribers may also be contained within each mailing list. Such demographic information may then be used to select only specific subscribers to a list

according to various requirements." In addition, Appellant readily admits that choosing a proper mailing list is crucial (see specification, pages 1-3). Basing that choice on the responses from a email sent out to each member on the list for verification and confirmation of accurate mailing data would be an obvious modification of Druckenmiller and "How to Generate Online Leads from the Web" because, as disclosed by the Appellant, "It is believed that the choice of mailing list is one of the most critical factors related to the success of a direct marketing campaign. Furthermore, Appellant, in the background of the specification specifically states, "...this is because the best list can often result in 10 times the response as the worst list for an identical mailing piece (page 2, lines 4-10). Here, the Appellant is specifically stating the relative value of the accurate, updated, and complete mailing list, and that multiple mailing lists are known to one of ordinary skill in the direct mailing arts.

As recited in independent claims 1, 4, 27, and 39, it is clear that the Applicant's invention is distinguished over the Druckenmiller invention in at least the steps of :

- i) selecting a postal mailing list from a plurality of postal mailing lists,*
- ii) sending an e-mail message to a subset of list members for each postal mailing list in a plurality of postal mailing lists,*
- iii) selecting the postal mailing list from the plurality of postal mailing lists based on the responses to such an e-mail message.*

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. JP 05110593 A discloses Electronic mail system with device preparing mailing list - displays on screen on basis of held preserving mail category.
